

**ABSTRACT OF THE DISCLOSURE**

5 A content distribution system, capable of creating content and  
changing itself easily, is provided. In a content server 30, contents  
created by data written in the basic language, which can easily be  
converted into other languages, are stored. The content server 30  
identifies the type of a terminal device accessing thereto. Content being  
requested is converted into data written in a display language  
appropriate for the terminal device on a real time basis and the  
10 resultant data is transmitted to the terminal device. At the terminal  
device, display according to the display language data is carried out.
